

## MIXPACK EXPRESS

# Ultra-Portable Powered PA System

### Ultra-Portable Clean Power With Effects and EQ

The 350 Watt MIXPACK Express is one of three PA systems in the MIXPACK line, along with the 600 Watt MIXPACK and 1000 Watt MIXPACK Pro. Being the lightest and most portable of all MIXPACK PAs has its advantages. There simply isn't an easier, more affordable way to get this much clean power, mixing and Alesis DSP effects in one place. It takes only a few minutes from the time you bring MIXPACK Express into the venue, to the time the gig powers on, and power on it will.

MIXPACK Express comes complete with two 10" speakers and 350 watts of continuous power. All the right connections are present including balanced XLR, balanced/unbalanced TRS and unbalanced RCA so no matter what you need to connect, you're all set. MIXPACK Express also includes two speaker cables in the package so you can get set up in no time. The speakers attach and detach to the amp/mixer module using firm, rugged latches and the entire kit can be carried in one hand thanks to a convenient, molded handle on top.

The built-in mixer on MIXPACK Express has five input channels with 16 Alesis DSP presets with 24-bit effects for Hall, Room, Vocal, Plate, Stereo Delay, Reverb + Delay and Reverb + Chorus combinations. Fine tune the performance with the integrated 7-band graphic EQ and monitor all of it with the built-in LED and Monitor Out jack.
