

## SX215

# Dual 15" 2-Way Passive Speaker System

## Quality Sound Meets Rugged Design

### ROAD READY

Built to take a beating night after night, week after week, the SX215's cabinet is made of premium poplar plywood and is covered in a ruggedized black textured finish that is scratch and dent resistant. Recessed handles makes the SX215 easy and safe to move from rehearsal space to stage and back again while heavy-duty rubber feet ensure that it stays put no matter how much volume you pump through it. Full length metal grilles protect your speaker's drivers and horns from falling mic stands or other pitfalls of repeated stage use.

### Superior Sound Quality

The SX215 delivers a big sound with two large, high-performance 15-inch LF driver (2.5-inch voice coil), and an exacting 1-inch HF driver. What's more, it utilizes a trapezoidal design which greatly decreases the resonance of the standing wave in the cabinet for a more true and exact sound reproduction. The SX112 is the perfect solution for club installations, rehearsal spaces, gigging musicians, mobile DJs, and houses of worship who need additional sound reinforcement.
